

Safe Water for Children

Help the children with a donation!

[Learn more](#)

Due to inadequate sanitation facilities and lack of awareness about water and hygiene management, villages in India face various problems.

The Women Development Welfare Society wants to improve water and sanitation facilities in two villages and one school. It also aims to raise awareness about hygiene.

Help to make possible the construction of a water treatment plant for one village, a washing area and sewage treatment plant for a school and awareness-raising measures!

Together we can make the world a better place in small steps!
